Share an ADSL or cable modem and create a 54 or 11 Mbps wireless network

This 54 Mbps (802.11g) wireless high speed broadband router and Access point shares an existing cable- or DSL modem with several computers and can create a 54 or 11 Mbps wireless network up to 64 computers. The device is downwards compatible with 11 Mbps (802.11b) networks. The router and Access point provides high security functions like a firewall, WEP encryption (64/128/152 bit) and WPA (Wifi Protected Access)

Specifications

General specifications:

- 4 LAN ports
- Fast ethernet switch (10/100Mbps)
- 1 ethernet port to connect ADSL or cable modem
- 802.11g (54Mbps) and 802.11 (11Mbps) compatible
- Bandwidth between 2.4 and 2.48Ghz, 13 channels
- Supports roaming (automatically switches to nearest access point)
- Firewall Security with NAT/NAPT and DoS Protection
- Wireless range (0-120m) and dataspeed (1-54Mbps) are influenced by several factors (e.g. walls, doors etc.)
- Supports VPN pass through (PPTP/IPSec), Dynamic DNS, PPPoE/PPTP routing, DMZ hosting, DHCP server/client, virtual server
- NAT for multi-users to share a single IP address
- Web based configuration

Bundled accessories:

- Multi language manual
- Power supply
- RJ-45 cable
- Antenna

Minimum system requirements:

- 10/100Mbps network
- Broadband internet connection (Cable or DSL modem with RJ-45 connector)

Warranty:

3 year
